**Number of raspberry cane midge sex pheromone traps @ £50/trap
(ex VAT) required for testing in 2006:**

A trap consists of:

- A standard white delta trap and hanger
- Sufficient lures for 1 April to 30 September for the trap
- 24 sticky bases to be changed weekly
- Instructions on how to deploy and monitor the traps including colour photographs to aid midge identification
- Instruction on data collation and relay of results and details of plantations and insecticide applications to East Malling Research

Traps should be deployed in early April and monitored weekly until the end of September.
